A GREAT AMERICAN JOURNAL

International Publications

AIMS & SCOPE

There is a greater sense of urgency for more publication outlets and opportunities in several extremely broad and rapidly expanding areas of modern applied mathematics that are usually clustered under the umbrella of mathematical programming, while mathematical programming has significant interfaces and intersections with all areas of pure and applied mathematics. Because of this multidisciplinary character of mathematical programming, there are immense and inexhaustible opportunities for advanced research as well as publications that could constitute valuable contributions to many areas of applied mathematics, engineering science, operations research, management, economics, industry, and finance. TMPA aims at publishing original research articles dealing with every aspect of mathematical programming, including convex optimization, nonlinear optimization, stochastic optimization, robust optimization, combinatorial optimization, global optimization, network algorithms, multiobjective fractional optimization, fractional programming, multiobjective fractional programming, multiobjective fractional subset programming. TMPA will also welcome innovative practical applications that address and serve the trending interest/direction of the fast-growing mathematical programming community.
